

## ROADWAYS AND WALKWAYS

### LION PANEL

**The Lion Panel is a premium, award-winning temporary roadway system that we designed in-house. It has the highest level of grip on the market and is dual-sided for pedestrian or heavy-duty vehicle use.**

This panel is dual-sided for every eventuality. The 'topside' has a unique water-displacing profile and a repeated 'tooth' to ensure the highest level of grip for pedestrians or vehicles. The 'underside' has a more aggressive profile with cross-serrations to provide an increased level of grip on cambers. Placed 'underside-up', this surface enables super heavy-duty grip for the largest of vehicles, even across sloping terrain.

The panel has zero trip hazards and internal cross plating to join panels side by side, which allows a flatter pad formation, reducing the risk of vehicle grounding.

- **Suitable for**
- Soft undulation, inclines and wet ground
- Heavy construction vehicles and plant
- Vehicle and pedestrian access
- Creation of cross-country roads, work-pads, standing areas and car parking

- **Unsuitable for**
- Steel tracked vehicles

- **Specification**
- Weight - 284kg
- Length - 2,410mm (connected)
- Width - 3,000mm
- Depth - 52mm
- Area - 7.23m<sup>2</sup>
- Carrying Capacity - Heavy-duty, dependent on ground conditions and requirements
- Installation Method - Sunbelt Rentals install
- Colour/Material - Aluminium

- **Benefits**
- Highest grip on the market, even in the wet
- Supports the heaviest road-going vehicles
- Two traction surfaces suited to heavy vehicle or pedestrian access
- Camber vehicle grip
- Captive cross plating and sunken bolts
- 100% recyclable product

- **SUPER-HIGH GRIP FOR MEDIUM TO HEAVY-DUTY ACCESS IN WET CONDITIONS**
